EDUCATION

International Institute of Information Technology, Hyderabad

Bachelor of Technology Computer Science

Hyderabad

July 2025 - July 2030

WORK EXPERIENCE

NexScholars

Backend Engineering Intern

Remote

Jun 2026 - Aug 2026

- Built backend services using FastAPI, Spring Boot, PostgreSQL, RabbitMQ, and Docker for authentication, curriculum management, faculty workflows, and a canonical question bank.
- Implemented an event-driven question workflow with a transactional outbox, durable RabbitMQ queues, delayed retries, dead-letter handling, and idempotent callbacks.
- Developed an AI-assisted pipeline integrating Mathpix OCR and OpenAI-compatible APIs for image extraction, question assembly, answer verification, curriculum tagging, and embedding generation.
- Implemented RS256/JWKS authentication with local and OAuth2 login, rotating hashed refresh tokens, token revocation, role-based authorization, and gateway-level JWT validation.

Streetsmart

Backend Developer - Volunteer

Remote

Apr 2025 - Dec 2025

- Built REST APIs with FastAPI for urban-image ingestion, geospatial analysis, and internal analytics.
- Developed image-processing pipelines integrating computer vision models to extract structured insights from urban imagery.
- Implemented geospatial analysis workflows and collaborated with urban experts to translate domain requirements into backend features.

Whiplano

Development Lead / Backend Engineer

Remote

Aug 2024 - Mar 2025

- Led a cross-functional team across backend, frontend, and product design to deliver a working solution within hackathon constraints.
- Designed and built a FastAPI and MySQL backend, including the database schema, API endpoints, and service structure.
- Developed and deployed a Solana smart contract to support blockchain functionality required for the project.
- Translated product and competition requirements into technical implementation decisions.

OPEN SOURCE CONTRIBUTIONS

Yazi | Rust, Lua

github.com/sxyazi/yazi

- Implemented a bulk-create workflow that opens the configured editor for batch file and directory creation, validates entries, and requests confirmation before execution.
- Built a multi-file spotter that displays selected-file count and total size while caching directory sizes for reuse through Yazi's Lua API.

PROJECTS

WaTauri - Local-First WhatsApp Client | Go, Tauri, Next.js, React, SQLite, whatsmeow

GitHub

- Building a local-first WhatsApp desktop client with a Go sidecar and SQLite-backed local data, supporting QR pairing, chat synchronization, message sending, read receipts, and offline-first startup.
- Reduced initial loading time to approximately 10% of its original duration and lowered memory usage by approximately 30% through cursor-based message pagination, virtualized conversation rows, memoized chat rendering, indexed contact lookups, cached chat-state merging, and deferred authenticated UI loading.

SKILLS

Languages:	Java, Python, C, Rust, Lua
Backend:	FastAPI, Spring Boot, Spring Security, SQLAlchemy, Pydantic
Data & Messaging:	PostgreSQL, MySQL, MongoDB, Redis, pgvector, RabbitMQ, SQL
Infrastructure:	Docker, Docker Compose, Nginx, Linux, Bash, GitHub Actions
APIs & Testing:	REST, OAuth2/OIDC, JWT, OpenAPI, Postman, pytest, JUnit, Testcontainers, WireMock
AI & Imaging:	Mathpix OCR, OpenAI APIs, Pillow
